East Jakarta, Indonesia | +62 812 6193 2459

SUMMARY

Informatics Engineering graduate specializing in mobile and full-stack development (Android (Kotlin, Jetpack Compose), Flutter, React.js, Express.js, PostgreSQL). Focused on building efficient and user-centric applications with hands-on project experience. Skilled in API integration, state management, and performance optimization. Eager to take on new challenges and contribute as a responsible and adaptable Software Developer.

SKILLS

Programming languages	: Kotlin Java JavaScript Dart Python
Mobile Development	: Android (Kotlin, Jetpack Compose, XML) Flutter
Frontend (Web)	: HTML CSS React.js Tailwind CSS
Backend	: Node.js Express.js Flask
Databases	: MySQL PostgreSQL
Tools	: Android Studio VS Code Git GitHub Postman

PROJECTS

OverlAI — AI Overlay Translator

Mar 2026 – Apr 2026

Kotlin | Jetpack Compose | ML Kit | MediaProjection API

- Developed an Android overlay-based translator that captures on-screen content using MediaProjection and performs real-time OCR and translation
- Built a full processing pipeline (screen capture, image preprocessing, OCR, text merging, translation, overlay rendering)
- Improved OCR accuracy by reducing noise through bitmap preprocessing such as status bar cropping and overlay suppression
- Implemented a custom text-block merging algorithm to reconstruct vertical and fragmented OCR results such as Japanese text
- Managed overlay and capture lifecycle to ensure stable operation under Android system constraints

Manapp — Full-Stack Manga Reader Application

Mar 2025 – Jul 2025

Flutter | Riverpod | Node.js | Express.js | Web Scrapping

- Developed a cross-platform manga reader application with search, bookmarking, and infinite scrolling
- Built a custom backend service using Express.js to scrape, normalize, and serve manga data via REST API
- Implemented data parsing and transformation pipeline to handle inconsistent HTML structures from source websites
- Optimized frontend performance for image-heavy content using caching and lazy loading techniques

Xpendly — Expense Tracker Application

Feb 2026 – Mar 2026

Kotlin | Jetpack Compose | Room | DataStore

- Developed an Android expense tracking app with CRUD operations and time-based filtering (daily, weekly, monthly)
- Implemented reactive state management using StateFlow for dynamic UI updates
- Designed clean and reusable Compose components following MVVM architecture
- Managed local data persistence using Room and user preferences with DataStore

EXPERIENCE

WeSolve Solusi Indonesia

Apr 2024 - Jul 2024

Web developer intern

- Developed a full stack web application for employee attendance and task scheduling.
- Utilized React.js library to create engaging user interfaces and developed RESTful API with Express.js and PostgreSQL for data management.
- Coordinated effectively in an Agile team of 8, contributing to project planning, development, and testing.

EDUCATION

University of Indraprasta PGRI – South Jakarta, Indonesia

Sep 2020 – Aug 2024

Bachelor Degree in Informatics Engineering | GPA: 3.62/4.00

Final Project : “Designing an Android-based Skin Disease Detection Expert System”

- Developed an Android application integrated with a machine learning model to detect various skin diseases from uploaded images.
- Utilized TensorFlow to build and train a Convolutional Neural Network (CNN) for image classification and detection.
- Delivered an accessible mobile tool to support early diagnosis and raise user awareness of skin conditions.

Bangkit Academy 2023 H2

Aug 2023 - Jan 2024

Mobile Development Learning path

- Completed intensive training in Kotlin, Android Development, SOLID principles, and Jetpack Compose.
- Collaborated in a cross-functional team on a capstone project to build an Android app with AI-powered Android app featuring medicine photo scanning and medication reminder notifications.
- Graduated with Distinction, among the top-performing participants in the cohort
